

Case Study | Cleavelands, Bishops Cleeve

Main Contractor | Warners Retail
Contract value | £300K
(over 3 phases)

Neptune Building Services have recently completed a project with Warners Retail on the supply and installation of air conditioning systems and ventilation to the new build Cleavelands Office and Medical Practice in Bishops Cleeve:

The mechanical works at Cleveland's involved the installation of several important systems to support the facility's operations. Air conditioning units were installed to provide effective temperature control in key areas such as the gym, office, and medical spaces, ensuring a comfortable environment for occupants and staff.

For water distribution, a cold-water booster set was installed to maintain consistent water pressure throughout the facility, supporting all water outlets. The hot water generation system was designed using a Hydrobox unit, which efficiently supplies heated water to the newly constructed changing rooms and showers. This setup ensures the facility has a reliable supply of both cold and hot water to meet the needs of users.
